You are right, it's filled with soft soils.

Cheers

Danny

Excellent news, thanks for the update

Follow the tunnel. It might be filled with the material.

You'd need to do complex electromagnetic, ultrasound and negative ionization measurements.

I'm coming next June in the area (Singapore) and would wish to check on excavation.

All the best,

Dr. Sam Semir Osmanagich, Ph.D.

Hello Sam,

Excavations went well. Now, we have clear proof about the buried pyramid. We also found evidence of burried tunnel. Unfortunately we had to stop digging the tunnel since the granted time end. Now, we are still doing lots of

analysis while waiting for the new government to follow up our research. Last week, we had a meeting with the ministry of tourism. Then a day after he visited G Padang. He was really impressed and in the press conference he declared that Gunung Padang is a PYRAMID, and he intended to make it as a big tourism spot

Best wishes

Danny
