ABOUT POLYCONTRAST INTERFERENCE PHOTOGRAPHY

ABOUT POLYCONTRAST INTERFERENCE PHOTOGRAPHY

In the late 1980s, using microchip technology, Harry Oldfield developed a scanner which could provide a real time, moving image of the energy field. He believed that the future of analysis lay in finding an effective scanner which can 'see' imbalances in the energy field rather than disease in the physical body.

This system became known as Polycontrast Interference Photography or PIP. Harry thought that the human energy field might possibly interfere with photons – 'energy packets' of light – or even what might be called 'subtle energy photons' in some way. He decided that ambient (surrounding) light would be interfered with by the field both when the incident ray travelled towards the object and when the reflected ray bounced off the object. In the main, the 'object' of his interest was human beings.

He devised a computer programme which would analyse the different light intensities being reflected from the person or object being scanned. This system is at the same time deceptively simple and enormously accurate in the hands of people who know both how to operate it and what they are looking at.

Harry says: "We believe that we are showing up an energy interaction with light, which is giving us an insight into the energy counter-part, the etheric template on which our physical molecules are strung. On average, every atom in the human body is replaced every seven to nine years. Think of your body not as a physical structure but as a moving fountain of molecules that are constantly being replaced. So what keeps them a coherent recognisable form? We believe it to be an organising template of energy.

To see the body's energy field with PIP, ideally the person is in a room with full spectrum lighting at a controlled output, standing against a white backdrop. The picture is taken with a digital video camera which acts like an artificial eye. A lead from the camera acts like an optic nerve connecting it to a computer which acts like an artificial brain. The program which runs the system is the artificial thinking process which makes sense of all the millions of bits of information..

ABOUT POLYCONTRAST INTERFERENCE PHOTOGRAPHY

The computer screen then displays the end project of what the 'brain' has seen. In effect what we have achieved here is a system which can see the energy field from and around the body in much the same way as people with gifts of vision can. Of course technology cannot match the details and intricacies of these people with gifts, but future developments in the PIP system might bridge some of the gaps

The PIP system shows up many patterns and colours which a trained eye can relate to a person's energy balance and well being and although some of these things might be connected to health we emphasise that the system does not take the place of medical examination or diagnosis."

Harry says: "Any clinic with a computer could have one. Of course, analysis of the information, pattern recognition and so on is a completely different matter. Whilst anyone could look at an X-ray of a broken leg, gaining useful clinical information from it is something which requires specialist training, knowledge and experience. The same is true with using PIP."

Harry is often asked whether the colours seen with PIP are the actual colours of the aura? "Absolutely. Some clairvoyants and mystics with their gifts helped me develop some of the filters in PIP which simulate what they see. They naturally have eye and brain mechanisms that can pick up these subtle changes of light. When you're looking at chakra colours on our visual equipment, you're not just seeing one colour, you're seeing a mixture of colours.

But if a chakra is behaving itself perfectly, one colour will predominate – for instance the throat chakra has more of a blue hue when it is balanced than when its not. The same with the base chakra – it will be a dirty muddy brown if there are problems and red if it's healthy. Also when red kundalini energy goes elsewhere, that is, goes into the wrong place at the wrong time, there is a potential danger. We are able to show this potential danger to people when they have a PIP scan.

Researching fields:

EXAMPLES AND MEANING OF COLOURS IN
POLYCONTRAST INTERFERENCE PHOTOGRAPHY

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Health - Balance

Airy, bright, vivid colors
Symmetrical shapes and forms
Less congestion
Less monochrome and dark spots

The disease - congestion

The darker colours
Scattered and smeared colors
More red and muddy brown and black
Irregular patterns

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Before therapy

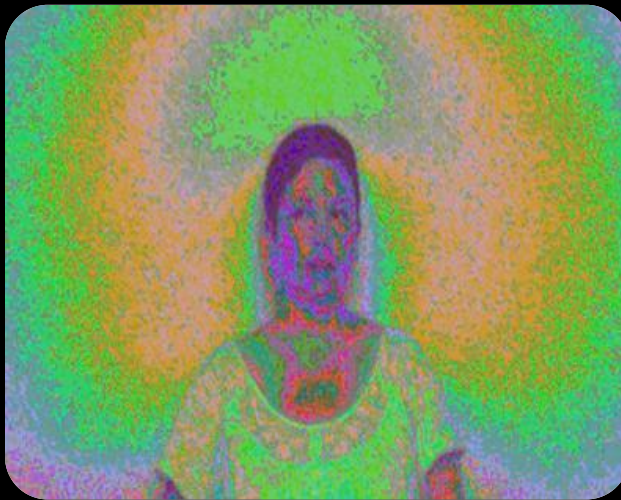

The presence of muted and dark colors on the body and around the patient

After treatment

The presence of lighter and very clear colors on the body and around the patient

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Aura - Energy blockages

The presence of muted and dark spots on the body of a person (head and chest)

Energy meridians

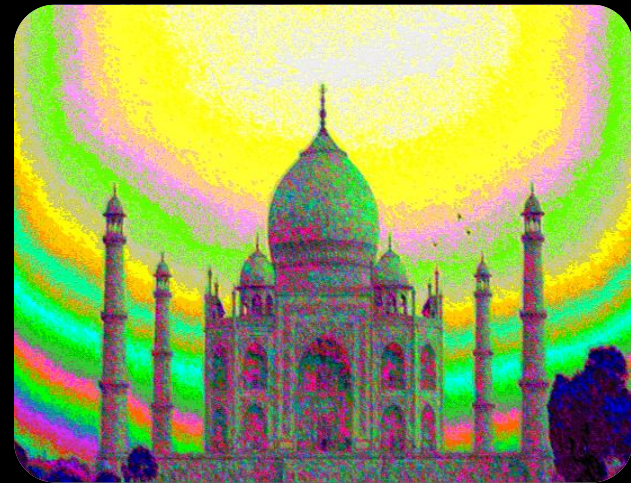

Display of the energy meridians of the fingers and hands

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Temple

Energy field around the modern religious building

Mosque

Energy field around the old religious building

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Temple St. Sava, Belgrade (SRB)

Spherical propagation fields around the dome of the temple. Present dominant yellow belt around the dome which is an indicator of good vital and spiritual energy. It also points to the increased electromagnetic activity

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Mountain Avala (SRB)

Normal ambient field above the mountains. The presence of horizontally oriented fields.

Settlement Mala Krsna (SRB)

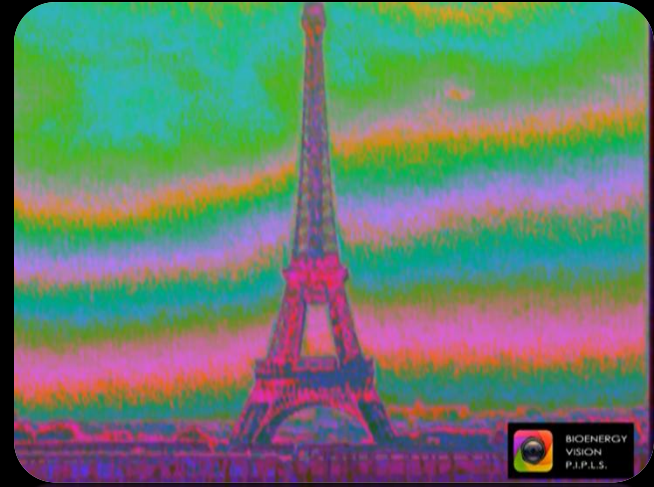

Normal ambient field above the village. The presence of horizontally oriented fields.

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Bridge of Ada, Sava, Belgrade (SRB)

Wriped energy field above Belgrade and around the bridge on Ada.

Eiffel Tower, Paris (FRA)

Normal ambient field above Paris and around the Eiffel Tower. The presence of horizontally oriented fields

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

Châteaux de la Chambord (FRA)

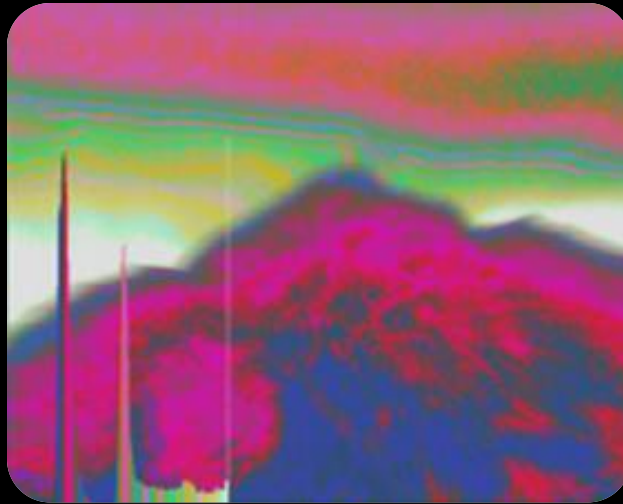

Rough field above the castle

Châteaux de Amboise (FRA)

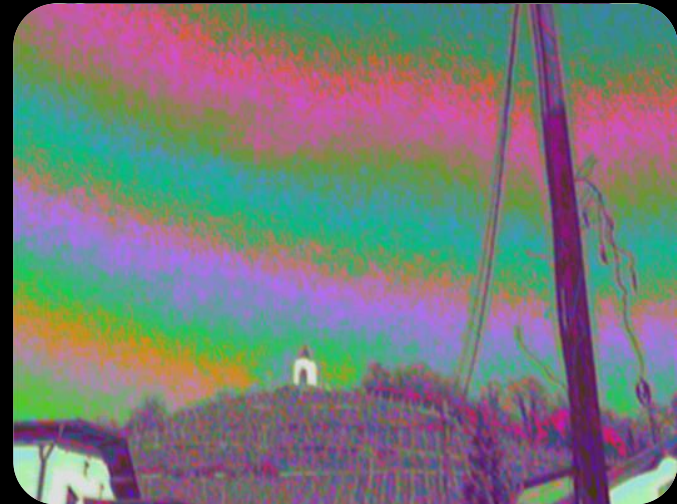

Rough field above the castle

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

The natural pyramidal mountain

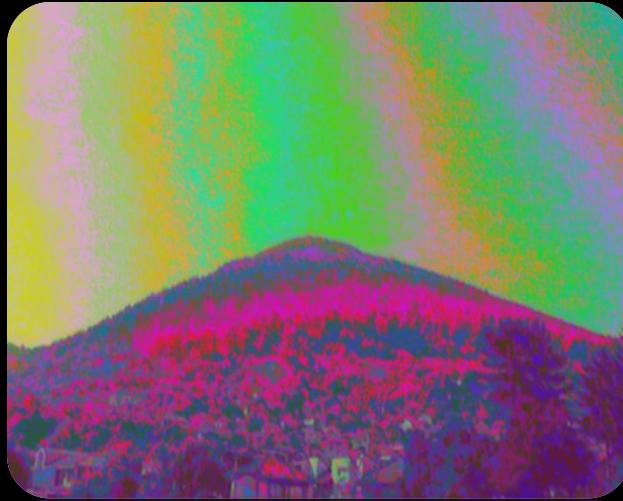

Normal ambient field above the pyramid mountain. The presence of horizontally oriented fields.

Hill "Pyramid", Maribor (SLO)

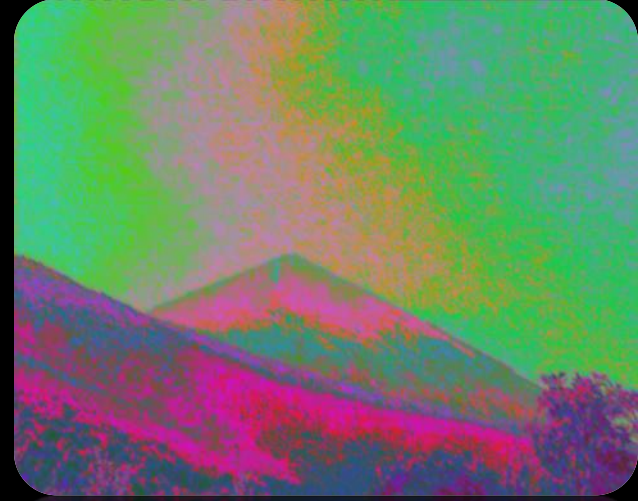

Normal ambient field above the mountains. The presence of horizontally oriented fields.

POLYCONTRAST INTERFERENCE PHOTOGRAPHY - COLOURS

BOSNIAN PYRAMID OF THE SUN

Unnatural ambient field above the pyramid. The presence of vertically oriented fields. Visoko, Bosnia and Herzegovina

ARTIFICIAL CREATED PYRAMID RTANJ

Unnatural ambient field above the pyramid. The presence of vertically oriented fields. Rtanj, Serbia.

PIP PANORAMA

PIP PANORAMA – BOSNIAN PYRAMIDE OF THE SUN AND TOWN VISOKO

The subject: Bosnian Pyramid of the Sun.

City shooting: Bridge on Fojnica at the entrance to K.T.K.

Distance: 1.16 km

The direction of recording: Southeast - Southwest

Weather: Vedro

Date: 03.09.2015.

Time: 10:10

Propagation Field: uncommon (vertical) of the Bosnian Pyramid of the Sun, typical (horizontal) above the town of Visoko

STONE BALLS - PIP PHOTOS AND VIDEOS INVESTIGATION

#1

#2

#3

#4

During a short visit to the stone spheres park, Bioenergy Vision P.I.P.L.S. team performed measuring and recording at 4 locations.

Research locations:

#1 Stone sphere (The first larger stone ball. Right from the bridge)

#2 Stone sphere (First stone ball. Left from the bridge)

#3 Stone sphere (Second stone ball. Left from the bridge)

#4 Stone sphere (Third stone ball. Left from the bridge)

STONE BALLS COVERED BY PIP SCANNER

#1 Stone sphere

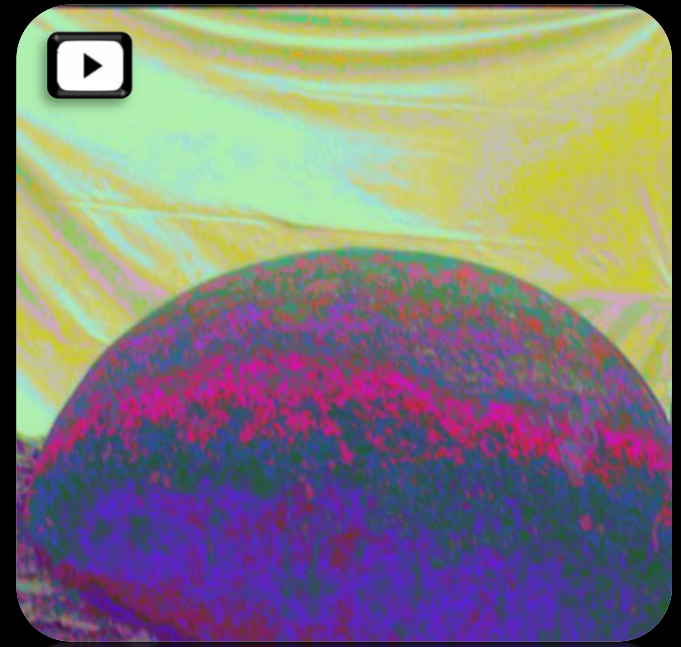

(The first larger stone ball. Right from the bridge)

#1 Stone sphere | PIP Scanning

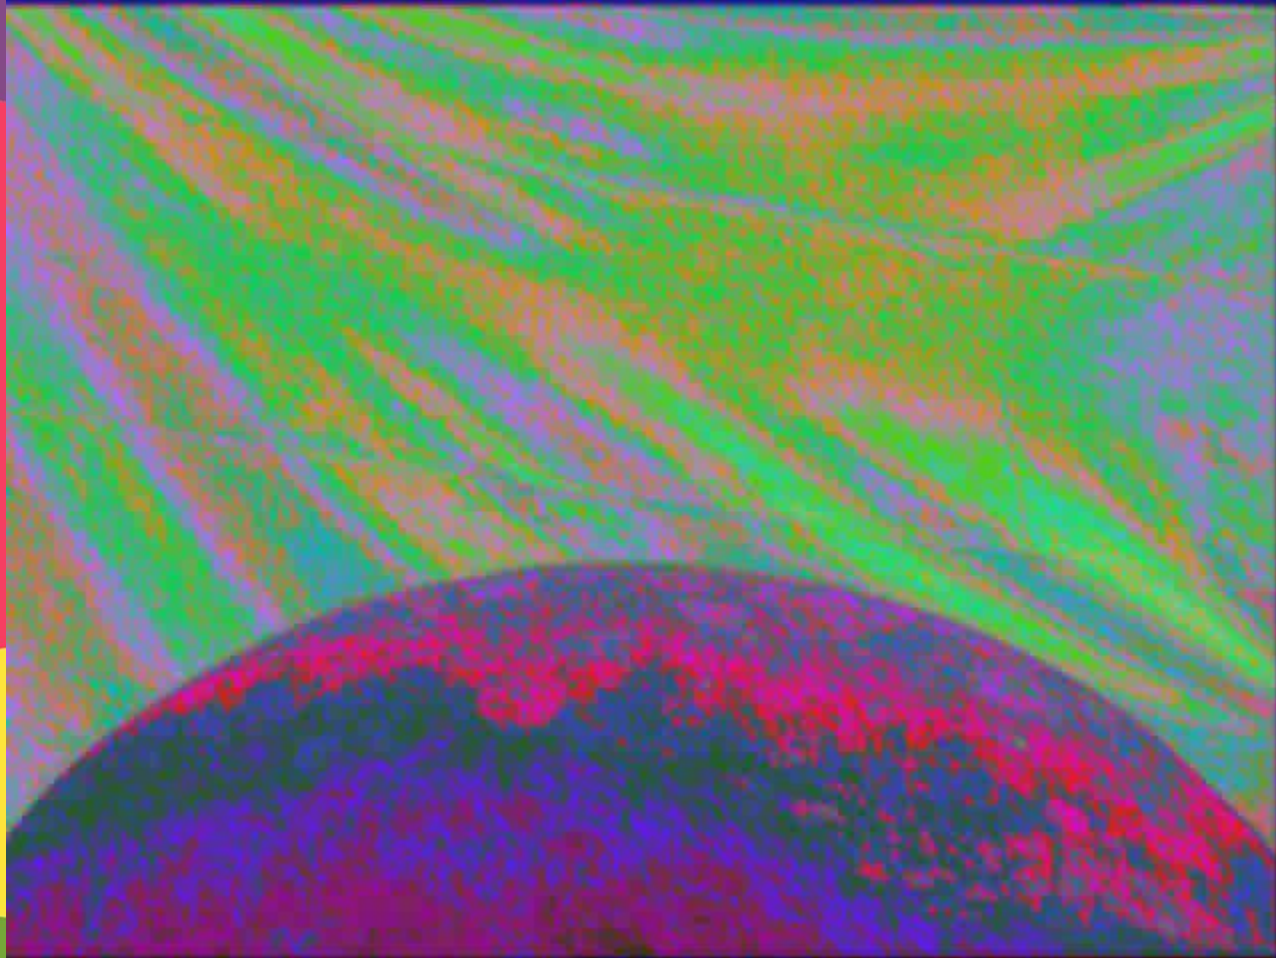

PIP Photo

PIP Photo with white background

On both PIP picture is visible energy polarization of stone ball. In the lower hemisphere were record low vibrating energy (dark colours). The upper hemisphere is characterized by taller vibrancy (light colours). On the PIP picture with white background, over the stone ball is visible presence of highly vibrant energies (Yellow colour).

#1 Stone sphere | PIP experiment

PIP Tracking - changes in ambient fields around the stone spheres during interaction

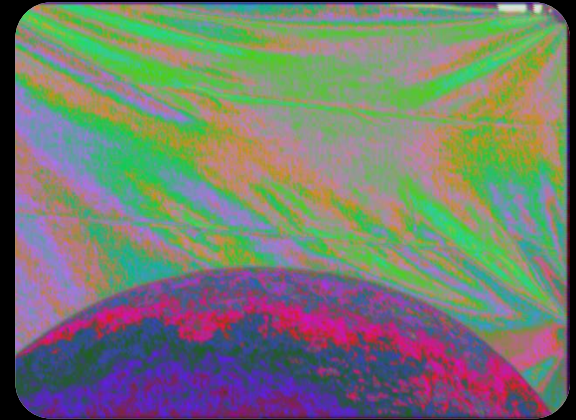

At this location was made an experiment. During PIP scanning, we tracked changes in ambient energy around the stone balls. During the experiment, it is recorded energy field before, during and after the interaction of the participants in the experiment. In the middle PIP photography, in the moment of contact (hand touch) with a stone sphere, an energy field around it has changed in high vibrante color. After the break of physical contact), energy field returns to the previous, before interaction.

PIP photo before interaction

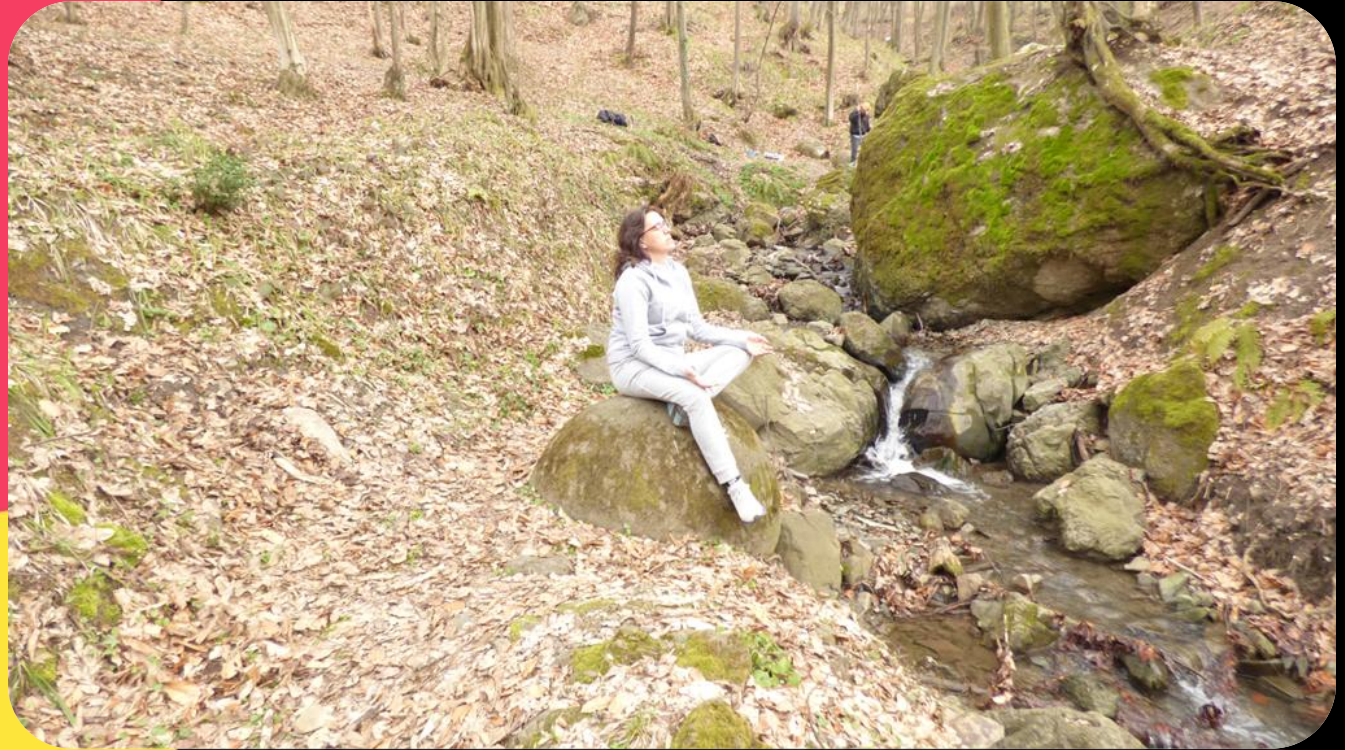

PIP photo during the hand touch interaction

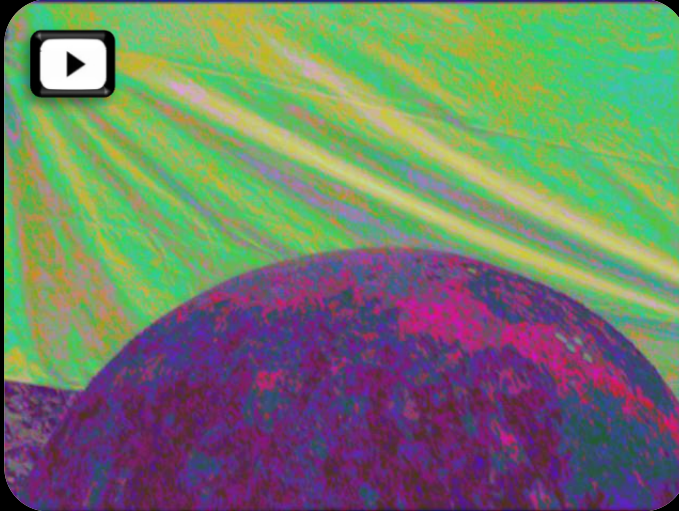

PIP photo after interaction

Visible energy field changes during interaction and presence of yellow color at the moment of contact with the stone ball

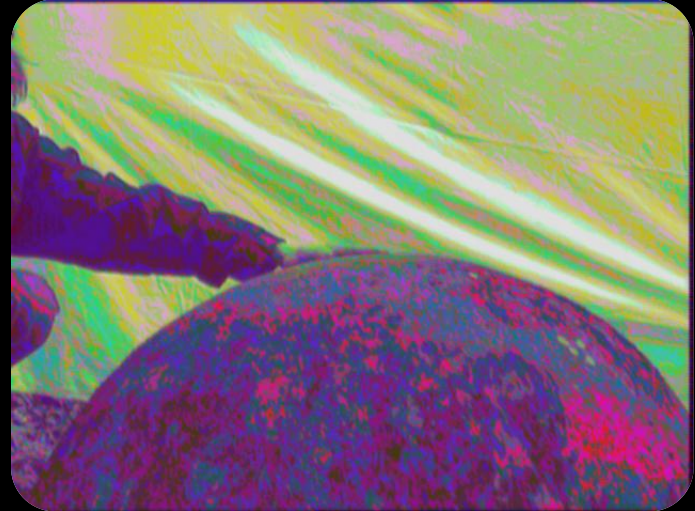

#2 Stone sphere (First stone ball. Left from the bridge)

#2 Stone sphere | PIP Scanning

PIP photo before interaction

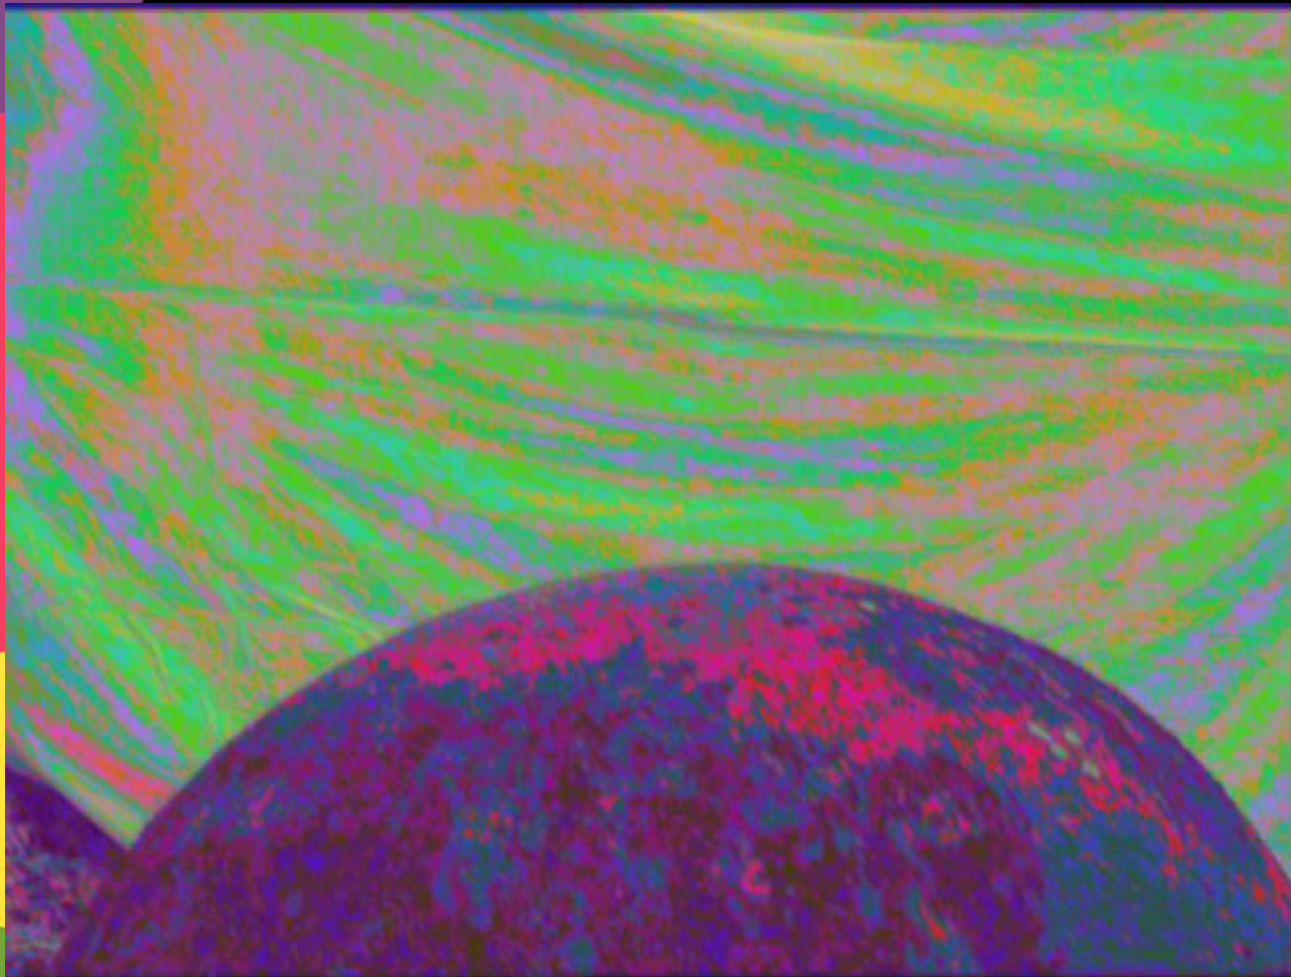

PIP photo during the physical contact

As well as in the previous PIP image slide, on the right PIP photography, in the moment of contact with a stone sphere (hand touch), energy field around it has changed from green in high vibrante, yellow color.

General Comment

-Around 3 stone spheres (#1, #2, #3) PIP scanner was noted that the ambient field around them filled with bright green and yellow color. Applying the interpretation of the PIP pictures by doctor Harry Oldfield, it can be concluded that the energy around the stone spheres for humans are good for healing, teaching, harmony, balance, growth, vitality, mental alertness, happiness, optimism, creativity, intellect, immunity, freeing or releasing vital forces.

-After PIP pictures analyses, was observed that there is a power polarization between upper and lower hemispheres. It can be interpreted that the upper half of the sphere is positive polarized, while the bottom half spheres is negatively charged. These PIP pictures and videos are a great aid to understanding energetics of stone spheres and their relationship with the environment.

- Also is visible positive energy field changes during interaction at the moment of participant contact with the stone ball

This experiment is a groundbreaking step forward for future research. For a serious analysis of the stone spheres in Zavidovići, is required all-day field work and several days of analysis.

Additional information beyond PIP scan:

	volume of sphere	EM ind. – bottom	EM ind. – top	EM ind. - above the sphere
#1 Stone sphere	4,34 m	30 nT	45 nT	57 nT
#2 Stone sphere	3,50 m	35 nT	40 nT	60 nT
#3 Stone sphere	3,40 m	35 nT	37 nT	55 nT
#4 Stone sphere	x	x	35 nT	40 nT
